TO THE TRADE.

Our Catalogue and Price List, for 1867, will be found to present a large and superior variety of Cooking, Parlor and Heating Stoves. In addition to those heretofore offered to public favor, we have two *new and beautiful Patterns*—the QUAKER CITY and the DEW DROP—both of which are got up in our usual complete and finished style, and are found to operate in the most satisfactory manner.

Our Standard Cooking Stoves, the NIAGARA, WILLIAM PENN, CORAL, and MONITOR, have acquired so high a character, and are so generally popular, as to scarcely need a reference.

Our Parlor and Heating Stoves are such as have been fully tested, and experience has convinced us, are not surpassed by any in the market, in appearance, economical operation, and satisfactory performance.

Soliciting the patronage of the Trade, and grateful for past favors, we are

Yours truly,

COX, WHITEMAN & COX.

Philadelphia, July, 1867.

NIAGARA.

Patented 1861.

NIAGARA COOK STOVE.

Patented 1861.

EXTENDED FIRE-CHAMBER.

The merits of the NIAGARA COOKING STOVE have brought it extensively into use, both for public and private purposes. THE QUARTERMASTER'S DEPARTMENT, AT WASHINGTON, D. C., adopted it at an early stage of the War, (just closed,) as being best adapted for the UNITED STATES HOSPITALS, and other places, where Cooking was required.

IT HAS AN EXTENDED FIRE-BOX, TAKING VERY LONG WOOD.

The Oven is Full One Size Larger than other Stoves of the same Class and No. in the Market.

THE DESIGN IS A MODEL OF BEAUTY AND NEATNESS, THE CASTINGS AND FINISHING UNEQUALLED.

QUAKER CITY.

Patented March 12th, 1867.

QUAKER CITY.

Patented March 12th, 1867.

With Extended Fire-Chamber, Deep Ash Pit and Sifter Grate for Ash Drawer.

A glance at the cut will impress you at once with the beauty and good taste of the design and style of this new stove. A very cursory examination will satisfy the trade that it is got up and put together in the best and most substantial manner; has all the excellencies and good cooking qualities of our William Penn and Niagara stoves, and is, at the same time, less costly.

The very favorable reports we receive from those using them, induce us to believe it will become the most popular stove in the market.

WILLIAM PENN.

For years this has been the *Leading Cooking Stove*, and its merits acknowledged by the thousands who have used, and are still using it.

Although many other Patterns have been introduced, and had their day, the WILLIAM PENN yet survives, and to-day stands out prominently in the front rank of First-Class Cooking Stoves.

We shall spare no pains in *Casting and Finishing this Stove*, and feel confident that years of popularity await it.

CORAL COOK.

The Coral Cook is not brought out by the Patentees as an Experiment. It is constructed on long-tried principles, and all the advantages suggested by long experience, for

Rapid Heating, Perfect Baking, and Economy in Fuel,

ARE COMBINED IN THE CORAL COOK.

The design is chaste and neat, and *the Oven larger than any Stove of the same class and price in the market.* We offer the "CORAL COOK" to our numerous customers with confidence, believing it will fully come up to the standard of our other popular Patterns.

BRILLIANT OVAL RADIATOR GAS BURNER.

This Stove is a model in its construction, beautiful in appearance, perfect in operation, being a RADIATOR, with the *Base* part so arranged that the draft damper gives complete control over the fire, and by a simple arrangement, the dust arising when shaking the Grate is carried off in the back column. It is not only a Gas Consumer, but a *Fuel Saver*, and ornamental as well as useful. We offer it to the trade as the *very best Parlor Stove out.*

DAWN GAS BURNING BASE,

WITH SHAKING GRATE, DOUBLE TOP, GAS RING, DOOR, DRAFT DAMPER AND AIR ORNAMENTS.

☞ The Dawn—thousands having been sold since its introduction—has given entire satisfaction. The arrangement for Shaking and Dropping the Grate is found to work admirably.

The Sheet-Iron Body fits inside the Top Rim, and is securely fastened thereto. By this arrangement, the Stove can be handled without the liability of shaking to pieces, and is free from dust and dirt.
